

# Practice Problems

1. Write a function to convert temp C to F and write another function to convert F to C
2. Write a function to check even or odd number
3. Write a function Whether a year is leap year or not
4. Write a function Calculate the volume of spheres
5. Write a function that takes an array of numbers and returns the sum of all the numbers in the array.
6. Write a function that takes an array of numbers and returns a new array with only the even numbers.
7. Write a function that takes an array of numbers and returns the largest number in the array.
8. Write a function that takes an array of numbers and returns the second largest number in the array.
9. Write a function that takes an array of numbers and returns a new array with each number squared.
10. Write a function that prints all the prime numbers between 1 and 50.
11. Write a function that takes a string and counts the number of vowels (a, e, i, o, u) in the string.
12. Write a function that takes an array of numbers and a target number. The function should return true if the target number is in the array and false otherwise.
13. Write a function that takes an array of numbers and returns the sum of all the positive numbers in the array.
14. Write a function that takes a number and returns true if the number is a palindrome (reads the same forwards and backwards) and false otherwise.
15. Write a function that takes a 2D array (array of arrays) of numbers and returns the sum of all the numbers.

16. Write a function that takes two arrays of numbers and returns a new array containing only the numbers that are present in both arrays.
17. Write a function that takes a number and returns an array of all its divisors.
18. Write a function that takes a string and returns the most frequent character in the string.
19. Write a function that takes a number and returns true if it is an Armstrong number and false otherwise.
20. Write a function that can swap two numbers in an array of numbers
21. Write a function that takes a number n and returns the nth Fibonacci numbers.
22. Write a function that takes a string and returns a new string with all the duplicate characters removed.
